

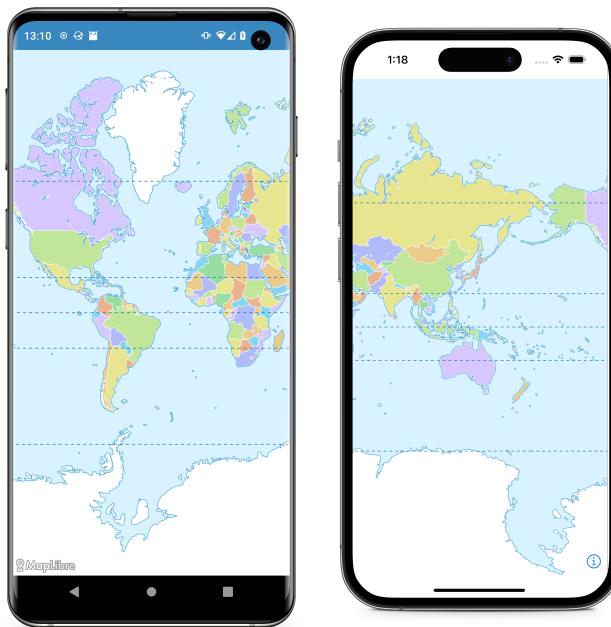

# MapLibre Native

MapLibre Native is a free and open-source library for publishing maps in your apps and desktop applications on various platforms. Fast displaying of maps is possible thanks to GPU-accelerated vector tile rendering.

This project originated as a fork of Mapbox GL Native, before their switch to a non-OSS license in December 2020. For more information, see: [FORK.md](#).

## Getting Started

To get started with MapLibre Native, go to your platform below.

## Documentation

- [Android API Documentation](#), [Android Quickstart](#)
- [iOS Documentation](#)
- [MapLibre Native Markdown Book](#): architectural notes
- [Core C++ API Documentation](#) (unstable)
- Everyone is free to share knowledge and information on the [wiki](#)

See below for the platform-specific [README.md](#) files.

## Platforms

- [Android](#)

-  iOS
- GLFW
- Linux
- Node.js
- Qt
- Windows
- macOS

Platforms with a  are **MapLibre Core Projects** and have a substantial amount of financial resources allocated to them. Learn about the different [project tiers](#).

## Renderer Modularization & Metal

MapLibre Native for iOS 6.0.0 with Metal support has been released. See the [news announcement](#).

## Contributing

To contribute to MapLibre Native, see [CONTRIBUTING.md](#) and (if applicable) the specific instructions for the platform you want to contribute to.

## Getting Involved

Join the [#maplibre-native](#) Slack channel at OSMUS. Get an invite at <https://slack.openstreetmap.us/>

## Bounties 💰

Thanks to our sponsors, we are able to award bounties to developers making contributions toward certain [bounty directions](#). To get started doing bounties, refer to the [step-by-step bounties guide](#).

We thank everyone who supported us financially in the past and special thanks to the people and organizations who support us with recurring donations!
